EDUCATION

Cornell University, David A. Duffield College of Engineering

Expected May 2029

Bachelor of Science in Operations Research and Engineering | GPA: 3.82

Coursework: Data Structures & OOP · Probability & Statistics · Linear Algebra · Multivariable Calculus · Data & Decisions

Activities: Kappa Theta Pi Tech Fraternity (VP of Committees), Cornell Blockchain, Cornell Maker Club

Regis High School · President of Engineering Club, States Finalist PF Debater, Computer Club, Robotics Club

June 2025

EXPERIENCE

McCallos · mccallos.com

New York, NY

Chief Technology Officer

May 2026 – Present

- Sole engineer at a three-person startup now pursuing its first pilot clients, building operations and compliance software in React/JavaScript on Firebase with cofounders in NYC property management to replace their spreadsheets and email chains
- Turned problems that cofounders brought from their buildings into features, from package intake that reads a doorman's shipping label photo with Google Cloud Vision, to repair requests that become assigned maintenance work orders in fewer than 7 clicks
- Built a rule-based automation engine that scans every building each morning for approaching compliance deadlines, expiring permits and vendor insurance, and new city violations, then opens a work order or alerts or assigns the right staff
- Built role-based access for four staff roles and residents, each with its own desktop and mobile interface, validating every permission server-side, with an automated check that fails whenever the app's permissions and security rules disagree

Empire Environmental

Brooklyn, NY

AI Engineer

June 2026 – August 2026

- Developed an AI agent that drafts NYC Site Safety Plan filings so the firm can absorb its 30-year documentation specialist's retirement, inside an editor modeled on the documents staff already use, with a workspace per project and its contracts
- Cut a question the agent spent 413 seconds failing to answer to a cited answer in 35 seconds by building the ingestion pipeline that turns a contract's hundreds of pages of specifications and scanned engineering drawings into a searchable library of notes
- Recursively trained the agent in a sandbox, giving it a drafting goal, grading each attempt word for word and having a separate model refine its skills between rounds until its template fillings matched the specialist's own wording at 98/100 on average

Freelance Web Developer

Brooklyn, NY / Red Bank, NJ

Independent Contractor · Two paid client engagements

May 2026 – August 2026

- Launched a new site for an established two-location Italian restaurant (1,150+ Google reviews) whose old site had been broken for months, giving the business its first online catering requests, emailed straight to staff, and its own Stripe-powered online store
- Increased organic clicks 140% and impressions 134% to 25.3K within weeks of launch by consolidating a split domain that had been diverting 77% of traffic and redirecting 27 old page addresses to preserve its existing Google search rankings
- Brought a personal styling studio's consultation booking online, launching a site with embedded Calendly scheduling and an animated portfolio of her work, and designed business cards and printed magazines to help bring in new clients

GE Aerospace

Bohemia, NY

Engineering Intern

August 2024

- Delivered an 18 lb working prototype of a handheld aquatic propulsion device for an intern design challenge presented to GE program leads, designing it in Fusion 360 and OnShape and wiring a 24V dual-battery circuit for a 100W motor

CURRENT PROJECTS

Cornell Degree Planner · degree-planner-app.web.app

Class Roster API, Firestore

- Combined the class roster, degree requirements and RateMyProfessors ratings students check separately into one planner, built after struggling to choose a major as a freshman, so students can plan all four years and catch unmet prerequisites
- Designed an interactive visual roadmap that makes choosing classes, and then a major, feel natural, tracing the courses a student is interested in forward through their prerequisite chains while a side panel shows which majors those interests fit

Guitar Training Software

Web Audio API, TensorFlow.js

- Gave self-taught guitarists the correction a teacher would, tracking the fretting hand through a webcam with MediaPipe and projecting each chord's finger positions onto live video of their own fretboard after a quick four-corner calibration
- Named the chord being played in real time with a pitch-detection model and chord matching, and added an in-browser tuner and a practice guitar amp that simulates real speaker cabinets, so a beginner can practice with no teacher, tuner or amp

ADDITIONAL EXPERIENCE

Bay Ridge Fish Bar

Brooklyn, NY

Manager

October 2021 – October 2024

- Ran opening shifts, payroll, cash reconciliation and customer service for a family-owned seafood restaurant, and built Excel sheets tracking payroll and inventory that showed where the business was overspending and how demand shifted by season

SKILLS & INTERESTS

Languages & Tools: Python, Java, JavaScript/TypeScript, React, Node.js, PyTorch, Firebase, Stripe, Git, SQL

AI Engineering: Claude Code, multi-agent orchestration, agent skills, MCP servers, RAG pipelines, LLM evaluation

Interests: Music (drums, piano, guitar), golf, basketball, the gym, 3D modeling, 3D printing, PC building
